- **2. Guiding Policy** – Slides 16-20
- **3. Actions** – Slides 20-23

Diagnosis

Company Overview

Sustainable packaging made with seaweed

Key Facts

Origin
Founded in 2014, UK-based

Value Proposition
Only EU-recognized plastic-free material

Impact
21.5M Single-use plastics replaced

Channel & Segment
B2B Food service and events

Management Team

Pierre Paslier
Cofounder & Co-CEO

Rodrigo Garcia Gonzalez
Cofounder & Co-CEO

Karlijn Sibbel
Innovation Director

International Awards

WINNER
THE EARTHSHOT PRIZE

FOOD FOR LIFE SUPPLIER
Soil Association

WINNER THE SAMMIES 2023
ENVIRONMENTAL & SUSTAINABILITY AWARD

UK PACKAGING AWARDS 2022

Problem

Plastic pollution persists as "sustainable" alternatives fail industrial-scale viability

Dominance of Plastics

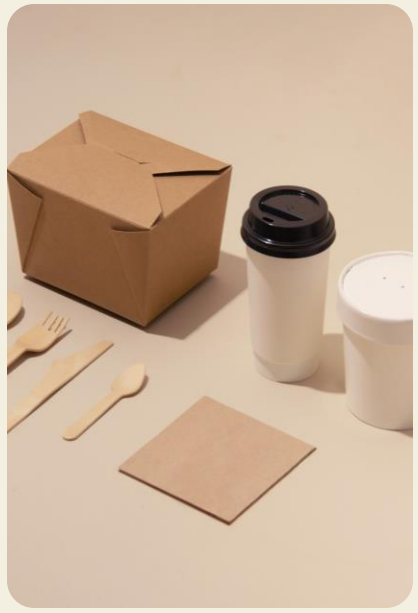

Drivers:
- Cheap
- Durable
- Grease-resistant
- Compatible with existing manufacturing

Consequences:
- 460MT produced annually
- 12MT in oceans each year

Failed Alternatives

- **Performance gap:** Paper-based packaging often requires plastic coatings to resist grease
- **Dependencies**: Many “biodegradable” plastics require industrial composting systems, which are unavailable in most markets

Source: World Wildlife Fund, UN Environment Program, H.B. Fuller

Opportunity

Strong demand for plastic-free packaging given tight regulations and ESG goals

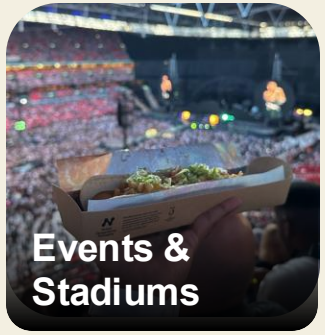

Market Needs

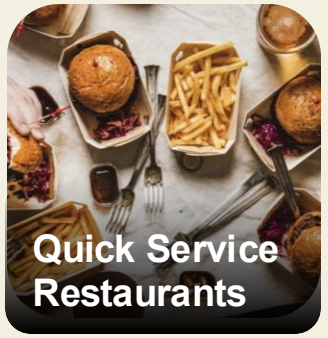

Material Performance
Grease-resistant takeaway packaging, but without a plastic lining

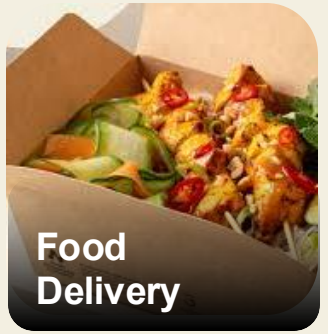

Circular Economy
Short-life packaging that does not rely on recycling infrastructure or systems

Eco-compliance
Materials aligned with tightening EU/UK plastic regulation

Segments

Source: PwC

Solution

Seamless plastic-free replacement that requires no change in consumer behaviour

Key Products

Released (food industry):
- Food container
- Rigid cutlery
- Food oil pipette

In Development (expanding to other segments):
- Energy gel pod, laundry sachet, bath sachet

Food Containers
Seaweed-coated and eliminating waste

Rigid Cutlery
Food utensils as natural as ice cream cones

Energy Gel Pods
Edible energy for the conscious athelete

Material Differentiation

- **Sourcing**: Not derived from fossil fuels
- **Recycling**: Biodegrades naturally in 4-6 weeks
- **Health**: Leaves no microplastics
- **Performance**: Heat and grease resistant

Suitable for:
Hot and cold food
Warming cabinets
Temperatures up to 90°C
Microwave ovens
Store out of direct sunlight: 4-38°C

Certifications:
Home compostable
Food Contact BfR36
Recyclability EN 13430
BPI Certified
FDA Approved
FSC® Certified

Value Proposition

A proven, scalable, and compliant plastic-free solution for global clients

1. Regulatory Legitimacy

Only **plastic-free** material under the EU Single-Use Plastics Directive, exempt from carbon tax

2. Proven Commercial Track Record

Delivered over **21.5M** units to major firms

3. Sustainable Scalability

Seaweed requires no fresh water, land, or fertilizer, making it the clear responsible material to scale against corn-based and plant-derived PLA

4. Green Impact

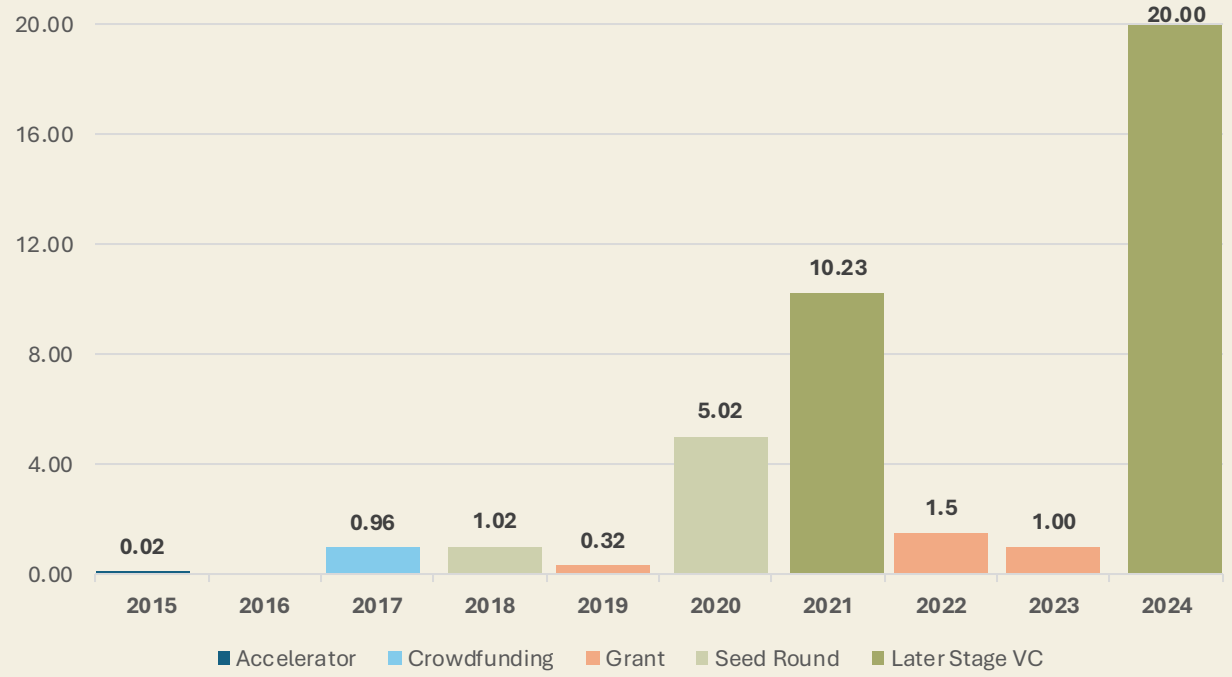

↓ **39%**
CO2e vs PLA-coated paper board

↓ **79%**
CO2e vs PP alternatives

Market Analysis

Diagnosis ● ○ ○

Notpla has proven to be desirable, viable and feasible

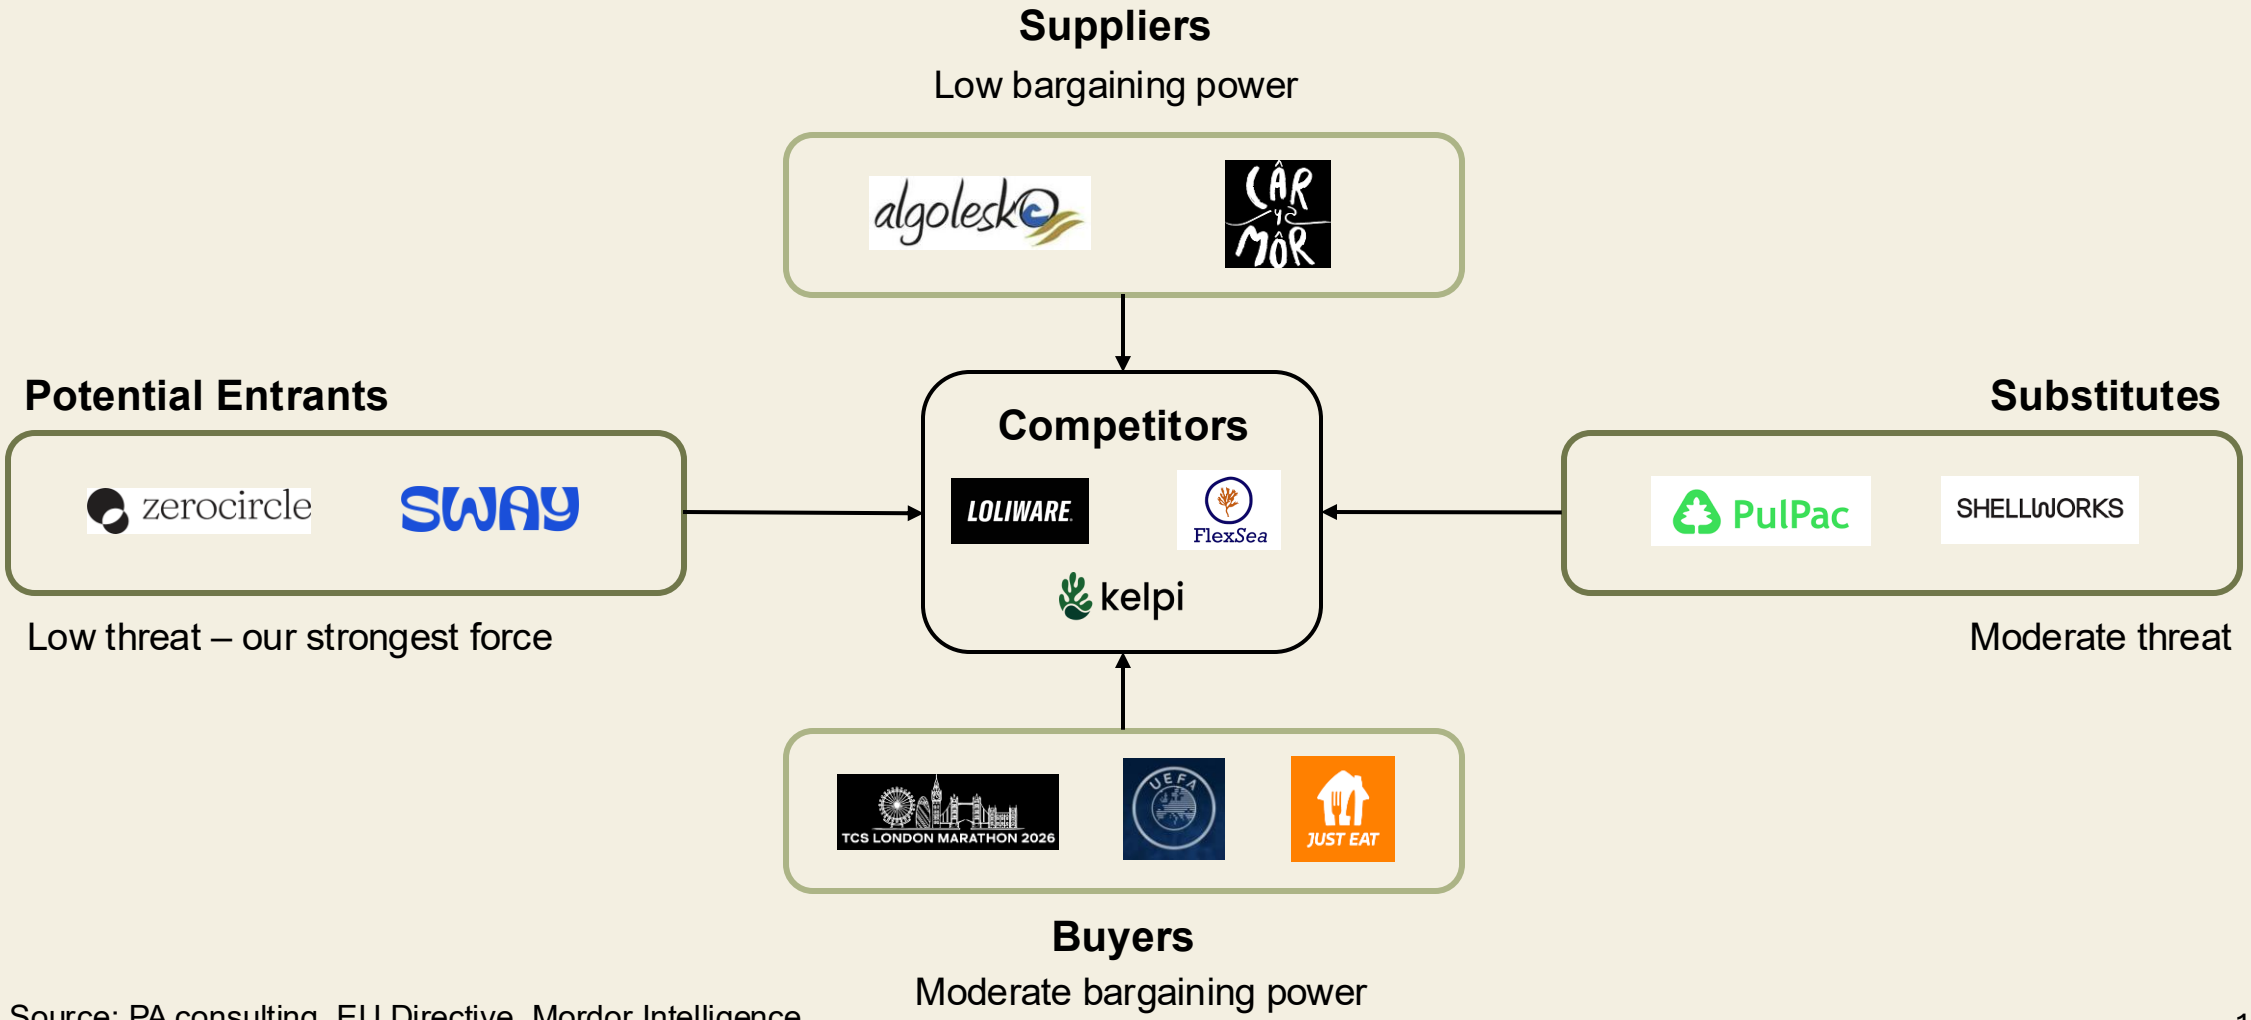

Key Takeaway:

Notpla represents an inevitable market shift where high consumer desirability meets regulatory viability and industrial-scale feasibility

Source: Gov UK, European Bioplastics, PWC, EU Directive

Market Analysis

Competitive Landscape

Competitive Advantage

Established market lead through exclusive IP and regulatory leadership

Patents Approved per Year

Market Pioneer: A first-mover advantage. Their tech is 3 years ahead, proven for mass market

Defensible IP: Legally protected by 25 patents

Regulatory Edge: Only material with complete plastic-free certification

ESG Catalyst: strategic partner for corporations meeting eco-goals

Guiding Policy

Notpla's Objectives

Guiding Policy

Current Outlook and Milestones

Currently replaced **21.5M** single use plastics

- Commercial validation across 10+ European markets
- Adoption by major venues, foodservice and retail partners
- Certified "plastic-free" under EU standards

2026: Viable business case

Aim to replace **100M** per year in the next two years

- Enabled by €23M Series A+ funding
- US manufacturing expansion to localize production
- Operational scale-up (capacity, distribution, supply chain)

2028: Moving from niche to mass-market penetration

1B replaced in total by 2030

- Enabled by new 2026 funding round
- Positioning as global leader in natural packaging materials

2030: Building a global materials platform

Source: Packaging Europe, Euronews

Notpla's Strategies

Guiding principles for the future of Notpla

- **Business Viability**: Reduce cost per unit with economies of scale
- **Market Expansion**: Targeting high-consuming plastic countries
- **Mass Market**: Secure long-term B2B contracts

- **Portfolio Breadth**: Building one product in many categories
- **Adaptive Manufacturing:** Plug-and-play processes to integrate with client's manufacturing
- **Material Performance**: Defend tech leadership by focusing on heat resistance, durability and UX

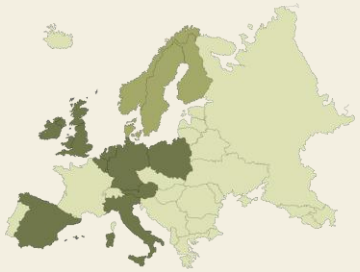

- **North Star Metric:** Moving from net zero to nature positive
- **Responsible Sourcing**: Prioritise regenerative seaweed sourcing in any product
- **Health**: No microplastics for enhanced fertility

Geographies

Operating Interest Guiding Policy

Strong presence in Europe, expanding in US, and long-term potential in APAC

Europe

Regulatory Consolidation

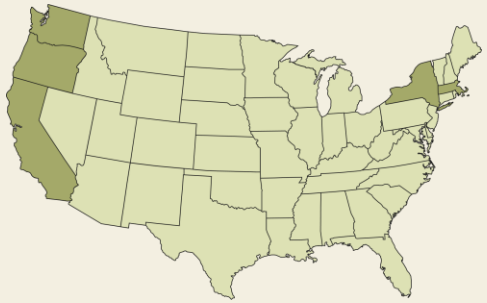

- ✓ Notpla operates in 10 countries within Europe
- ✓ Europe is planning to ban all single-use plastics by 2030
- ☒ Lower volume potential in interest countries

Strategy Viability Rating

Impact & Innovation

★ ★ ★ ★

US

High-Volume Opportunity (NY, California)

- ✓ Capitalising on Series A+ funding
- ✓ Segments: Target stadiums (through Compass Group) and quick-service restaurants (QSRs)
- ✓ Leads global per-capita plastic use
- ☒ Lower sustainability incentives

Impact & Scalability

★ ★ ★ ★

APAC

High Seaweed Supply (Korea, India, Japan)

- ✓ Tapping into existing seaweed infrastructure to lower COGS
- ✓ Address the world's fastest-growing sustainable packaging market
- ☒ Difficult cultural barriers and Chinese high competitiveness

Impact

★ ★

Source: Packaging Europe, Euronews

Value chain

Guiding Policy

Securing regional supply to scale innovation through global brand partnerships

Upstream

Opportunity for scalability ★ ★ ★

Secure seaweed supply through partnerships with seaweed farming and processing hubs in high-yield areas like America

Focus for Action 2

Core

Notpla

Current Strength
Sustainability

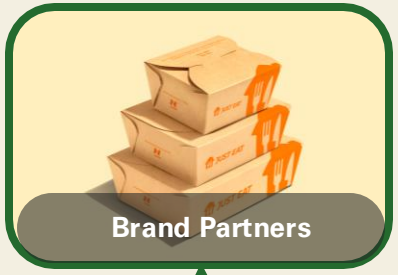

Downstream

Opportunity for innovation ★ ★ ★ ★

Integrate with manufacturers and global brands through licensing and partnerships

Focus for Actions 1 and 3

Sustaining Competitive Advantage

Guiding Policy

Rapid R&D and commercialization will be a key driver for our competitiveness

- Promote the **"Network Effect"** with international partnerships similar to Just Eat
- Maintain the 10-year head start on supply chain relationships

- **Proprietary data and record** on seaweed performance across 10+ global markets and 21 million+ units replaced
- Improves unit economics, increasing pricing power

- Focus on deepening the portfolio of **25 patents** for both the product (box) and the molecular process (resin)
- Exploit integration with existing industrial machinery

Actions •••

Action 1: Growing Sales

Actions

The US fast-food industry is the fastest path to achieve our 1B plastics replaced goal

The US plastics market hit **30.9M tons in 2026**

Capturing just 1% of the US fast-food clamshell market would equate to a **billion-dollar revenue opportunity**

20+ US states and the FDA have banned "forever chemicals" (PFAS) in food packaging

New "Extended Producer Responsibility" laws now force brands to **pay for plastic cleanup**

US consumers respond particularly strong to messaging around **microplastics and food safety**

Through partnerships like **NextGen Consortium**, Notpla could collaborate with McDonald's, Starbucks and Taco Bell, who are committed to net zero in packaging

Source: Statista, NextGen Closed Loop Partners, FDA

Action 1: Growing Sales

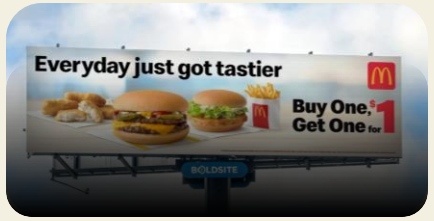

Actions

The US fast-food industry is the fastest path to achieve our 1B plastics replaced goal

Our Investment Needs

Infrastructure & Admin
Open a central **New York HQ Office** and a **logistics hub** to manage regional distribution and admin team expansion.

Marketing Materials
Hire a **production agency** for high-end partnership content with Nextgen Consortium and run **targeted digital ads** focusing on US PFAS bans and our products.

Human Capital
Fund a **US-based sales team** and **technical support engineers** to close NextGen Consortium partners and oversee factory transitions

Action 2: Vertical Integration

Build regional processing plants in US Northeast high-yield algae sources

International shipping accounts for 2-3% of all global CO2 emissions

Notpla's mission is sourcing, processing and selling without the ocean-crossing overhead

$200M North American kelp market

5.4 M kg of seaweed from 1,000 hectares of farmed ocean, built on existing infrastructure

A North American operations hub provides a strategic anchor to the Americas

By utilizing **CUSMA trade benefits**, we can scale our technology in Canada and South America

Source: International Energy Agency, Ecology Action Centre

Action 2: Vertical Integration

Build regional processing plants in US Northeast high-yield algae sources

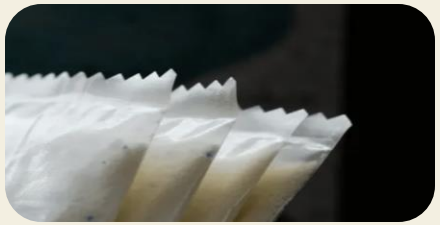

Our Investment Needs

Industrial Hardware
Large scale dryers, mills and extraction **machinery** require significant capital investment. This equipment enables continuous, high volume alginate production

Wet Logistic Network
Fresh seaweed rots within hours. A rapid **cold-chain network** must move seaweed from harvest to processing plant before it rots

FDA Approval
To sell products in the US market, **regulatory stamps** are needed. This will require application fees, testing costs and lawyers

Source: Food and Drug Administration

Action 3: Material Licensing

Actions

Monetising our EU regulatory edge via licensing of pellets, with potential to use in US

Scale via **existing client infrastructure** to accelerate our goal of 1B plastic units replaced by 2030

Transition from high-CAPEX manufacturer to **high-margin Material-as-a-service** provider

Rapidly **penetrate industries** Luxury, Agriculture, Pharma and others without specific know-how

Offload volatility for operational, labour, and energy risks directly to the licensee

Action 3: Material Licensing

Actions

Monetising our EU regulatory edge via licensing of pellets, with potential to use in US

Our Investment Needs

Process R&D
Engineering seaweed resin to match the physical profiles of **injection moulding and thermoforming**. Ensuring our material integrates into existing 24/7 production lines

Application R&D
Developing a variety of resins tailored **for specific mechanical properties** (e.g., the flexibility of a bag vs. the heat-resistance of a coffee lid)

Legal & IP Defense
Securing patent filings for palletisation process. Establishes **a Legal Defensive Fund** to enforce royalty agreements. Ensuring protection against reverse-engineering threats

Notpla

Q&A ...

Question – Action 1

Q&A

Why are NextGen consortium partnerships realistic, how will you form them?

- **Strategic alignment already exists,** focused specifically on eliminating single-use food packaging across QSRs
- **Leverage track record** from similar partnerships in Europe Just Eat, sporting venues, Decathlon…
- **Leverage Prince William's** connection, which has already created partnerships

Have you thought about alternative routes to enter the US market?

- **Stadiums** (B2B)
  - Why? Current connections
  - Why not? Cyclic
- **Sustainable packaging distributors** (B2B2C)
  - Why? Simplify logistics
  - Why not? Less margins

Why outsourcing marketing, and what content will you produce?

- **Brand new business segment** as Notpla has mainly grown through organic-focused channels
- **Volume of content required** for countrywide marketing includes much more than digital ads: billboards, events, sampling, print advertisement…

Question – Action 2

Q&A

Why build plants in US Northeast instead of outsourcing?

- Allows Notpla to maintain control of their **technology as its unique to them**, allowing to preserve first mover advantage

Why not shipping from Europe/Asia?

- Reduces distance and shipping emissions needed for **trade** within the US
- **Avoids tariffs** that may be imposed
- Long term it makes **logistics** for expansion around the Americas **easier**
- **Allows for the company to set up products for national differentiation** (eg. differing cup sizes)
- Large seaweed supply is readily available in the north-east of the USA

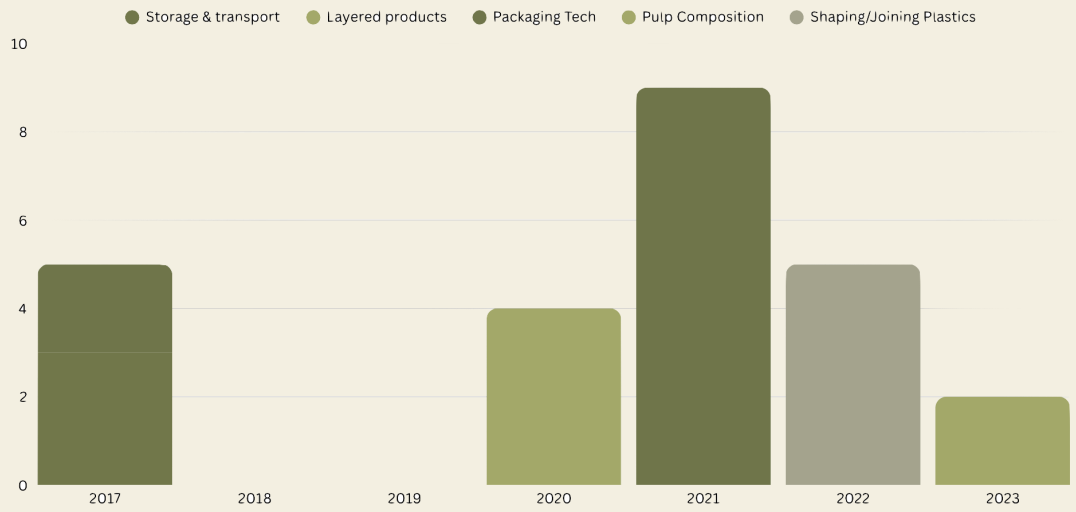

Why are we avoiding certain areas of the supply chain if we are vertically integrating?

- We integrate only where strategic value is highest
- Farming and manufacturing are **more available** externally
- Processing is the real bottleneck and where Notpla's moat is strongest
- So we avoid capital-heavy stages that do not improve differentiation enough

Questions – Action 3

Q&A

Protecting IP from being reversed engineered by partners

- **Trade secrets in formulation & process** (ratios, additives, processing conditions) that aren't disclosed.
- **Complex material engineering:** that are hard to replicate without tacit knowledge.
- **Contracts** (NDAs, licensing, audit rights) to legally deter copying.

Licensing IP creates more value

1. Asset light model – lower capex
2. Faster GTM
3. Scalability
4. Lower operational risks
5. Higher margins

Question – Process & Risks

Q&A

How did you arrive at the 3 pillars of the guiding policy?

- Followed lectures content
- Followed Notpla's past strategy and future objectives

What is the biggest risk in our strategies?

- Adoption – clients choose other providers over us, risking our 1B replacements goal
- Processing capacity – supply is abundant, the bottleneck is processing

Where did you disagree as a team, and how did you solve it?

- Disagreed on countries to expand to; APAC was strongly contested.
- Competitive dynamics (e.g. Taxi Wars in China and Ride-sharing wars in Southeast Asia) informed that Notpla's IP, regulatory status and brand trust with global clients do not translate cleanly into this market.
